Feature rich J+J multi-voltage actuator with LED status light and plug & play accessories.

New in 2008, the J3 range of electric actuators takes its highly successful predecessor, the J2 range, to the next level.

With an all new, rugged weatherproof and anti-corrosive Polyamide housing, the J3 offers more user-friendly features than the J2, and introduces a highly visible LED status light. This visual indicator shows whether the actuator is operating correctly, or has tripped out either by its electronic torque limiter, or has been left in ‘manual’ mode.

Site operators are no longer left with the ‘valve or actuator?’ question when an actuator doesn’t respond to a signal.

The J3 is quick and easy to install, with ISO5211 multi-flange mounting and a double square drive, allowing fast mounting to ISO5211 valves. There is no need to remove the cover to connect the J3 electrically, saving installation time.

Using the external DIN plugs and external wiring diagrams supplied with the actuator, installations can be pre-wired.

The effect of condensation is eliminated by an internal thermostatic anti-condensation heater that does not require a separate independent power supply.

Standard function for the J3-H20 is power open, power close, stays put on power failure.

New to the J3 are plug and play accessories – the function can be changed to either failsafe or modulating by fitting the new plug and play conversion kits.

The modulating kit has the new digital positioner that offers auto-calibrating and self-resetting functionality.

These conversion kits are available as optional extras.

The J3 is a very smart red box!

Quick guide to the J3’s standard features:

- Multi-voltage with auto-voltage sensing
- 110 ~ 240V AC or DC
- LED Status light to indicate operational status of actuator
- Electronic over-torque protection against valve jams
- Thermostatic anti-condensation heater
- Manual override for emergency hand operation
- 2 Volt free end of travel confirmation switches
- IP65 weatherproof anti-corrosive and UV protected Polyamide housing
- Local visual position indicator
- ISO5211 multi-flange mounting with double square drive
- All external electrical connections via supplied DIN plugs
- CE marked
- ISO 9000 manufacturer
- Failsafe and digital positioner plug & play kits available

J3 Status light functions:

- Constantly lit LED
- The LED flashes with 2 blinks
- The LED flashes on/off

If the actuator is operating correctly with no faults, the LED shows a constantly lit light.

If the actuator has been left in ‘manual’ mode, the actuator’s motor runs but doesn’t drive the output shaft. After a pre-set time, the actuator knows that as the torque limiter has not activated and that the motor is running, it must be in manual.

When the actuator senses an impending valve jam, the electronic torque limiter is activated and on activation, repeatedly flashes the LED on and off.
Specifications: **J3 -H20**

Voltage range - automatically sensed by actuator: 85-250V AC (1ph) or DC

Operating time (0-90° no load): 9 seconds

Maximum break torque: 25 Nm

Maximum operating torque (run/ reseat): 20 Nm

Duty rating: 75%

IP Rating (IEC 60529): IP65

Working angle: Standard (on request) 90° (180° or 270° options)

Mounting: ISO:5211 x DIN 3337 F03, F04 & F05 x 14

Motor switches: 2 x SPDT micro switches

End of travel confirmation (volt free): 2 x SPDT micro switches

Heater: 4 W

Ambient temperature range: -20° to +60° C

Electrical connecting plugs: DIN 43650/ ISO4400 & C192

Consumption:

Weight: 1.5 kg

Materials of construction:

- **Housing**: Anti-corrosive Polyamide
- **Fasteners**: Stainless steel
- **Gears**: Polyamide (speed reducing) & steel
- **Shaft**: Stainless steel
- **Output drive**: Zammac
- **Position indicator**: Glass filled Polyamide

Method of operation:

On receipt of a continuous power signal within the voltage range shown above, the motor runs and, via a flat gear system, rotates the output shaft. The motor is stopped by internal cams striking micro switches. On receipt of a reversing continuous signal, the motor turns in the opposite direction reversing the output drive.

Note:

The power signal needs to remain on at all times to activate the thermostatic anti-condensation heater. The volt free end of travel confirmation switches must NOT be used to cut the power.
The standard on-off version can have plug and play failsafe or modulating kits retro-fitted to convert the function.

The modulating kit contains a self calibrating digital positioner.

Dimensions: J3 - H20

Change of function retro-fit kits:

Failsafe option

This kit converts the actuator to a failsafe unit using a BSR (Battery 'Spring Return') system that provides an alternative (battery) power supply to set the actuator in the failsafe position should the main power supply fail. It can be configured normally open, or normally closed.

Modulating Option

Using the new self calibrating and self adjusting digital positioning system, this kit converts the actuator to a modulating device using either a 4-20mA or 0-10VDC control signal.
